Week 2 Status Update

1. Planned Work

● Implement CPU and memory components.
● Implement the selected instructions.
● Develop FETCH → DECODE → EXECUTE.
● Develop the basic UI.
● Test the simulator.

2. Completed Work

● CPU and basic memory components were implemented.
● 8 instructions were implemented and tested.
● FETCH → DECODE → EXECUTE was implemented.
● Basic HTML UI was developed.
● Step and Run functions were tested.
● Complete demo program was tested successfully.

3. Pending Work

● Process and PCB implementation.
● CPU scheduling and context switching.
● Further UI and memory improvements.

4. Issues Encountered

● Instruction behavior and CPU-UI integration required testing and adjustments.

5. Decisions Made

● FETCH → DECODE → EXECUTE will be used for instruction execution.
● The selected 8 instructions will be used for the Week 2 prototype.
● HTML will be used for the simulator UI.

6. Individual Contributions

● **Shaima Saleem:** CPU part.
● **Niranjana S:** Memory part.
● **Amra Fathima:** Testing.
● **Thejes Santhosh:** UI.

7. Work Accepted

● CPU, instruction execution, basic UI, and testing were completed successfully.

8. Work Carried Forward

- Process management and scheduling.
- Context switching.
- Further UI and memory development.

9. Week 3 Plan

- Implement process and PCB structures.
- Implement FCFS, Round Robin, and Priority Scheduling.
- Develop context switching.
- Integrate scheduling with CPU execution.
